

SABRE BUILDING SYSTEMS

Products and Services

Sabre Industries[™]

Building Systems by CellXion

As one of the largest shelter manufacturers in the United States, Sabre Building Systems by CellXion, offers a full line of concrete, structural steel and ultra-light aluminum shelters including Envolock Building Systems. We also offer mobile/disaster recovery products, such as cell-on-wheels, mini-cows, cell-on-light-truck-chassis (COLT), and tower trailers. In addition to manufacturing shelters and mobile products, Sabre Building Systems offers equipment integration, third party logistics, and decommissioning solutions.

Located in Bossier City, Louisiana, our facilities are spread out over 60 acres, and include a 250,000 square foot state-of-the-art shelter manufacturing plant, a fully-equipped 60,000 square foot steel fabrication facility, and an 80,000 square foot equipment installation facility. We have the ability to design and manufacture customer-specific shelters with unique loading, physical plant, and aesthetic requirements including double-wide and multi-piece shelters.

Sabre Building Systems by CellXion has an experienced team of engineers that supports current and new product designs capable of integrating our solutions into a wide range of customer applications. Utilized across several industries, our precast and lightweight steel buildings are perfect for central offices, fiber facilities, broadband headends/OTN's, collocation facilities, data and call centers, or emergency response facilities. Engineering documents are created utilizing the latest CAD systems. Computer modeling allows for complete loading analysis, testing of constructability, and virtually limitless product documentation.

The manufacturing of factory-built structures is regulated by a majority of states. Product approval programs are administrated by our engineering department with dedicated staff to focus on regulatory approval and support local permitting efforts. Sabre Building Systems by CellXion is currently approved by all states with regulatory programs. All of our shelters are inspected and labeled by a third party agency.

Sabre Building Systems has established a solid reputation for providing quality products and services at competitive prices. Our broad range of products and services allow us to offer integrated solutions for applications across many different industries. Contact us toll free at [877-213-2900](tel:877-213-2900), by fax at [318-213-2878](tel:318-213-2878), or via email at buildingsinfo@sabreindustries.com.

CONCRETE SHELTERS

Sabre Building Systems by CellXion's concrete shelters provide cost-effective intrusion, ballistic and fire resistance. Typically designed for wind loading of 150 mph, our shelters meet or exceed current editions of the IBC, UBC, SBC, BOCA, NEC, ACI 318-95, and AISC. Our concrete shelters have a building code recognized fire rating in excess of 2 hours, and a bullet resistance that meets or exceeds UL752. We utilize standard designs with industry standard lightweight concrete and ASTM A-615 Grade 60 steel reinforcing. Sabre's concrete shelters feature standard welded shelter construction providing "impact resistance zones" at corners and floor edge.

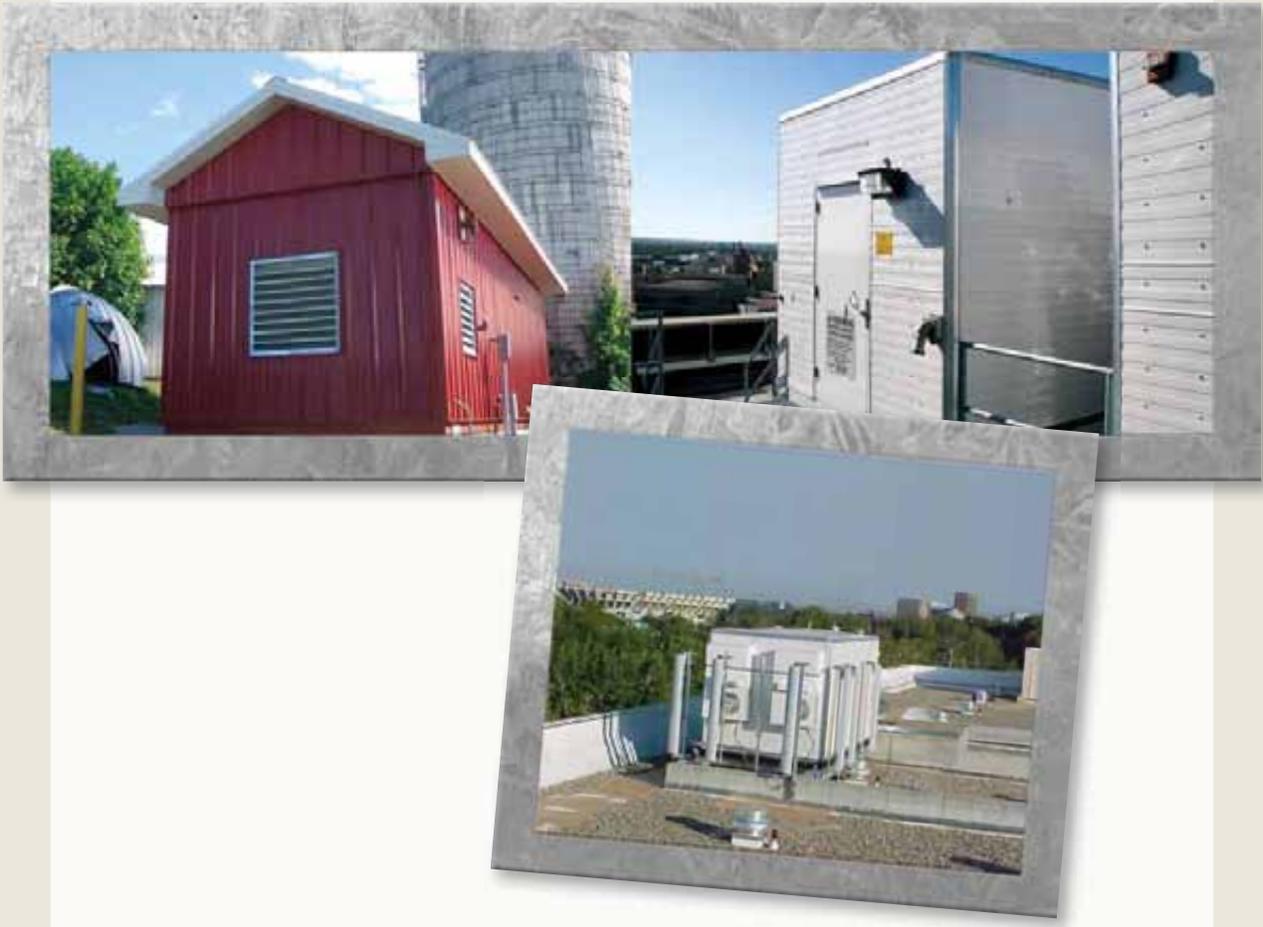

Our standard exposed aggregate shelters provide a durable, maintenance-free finish. Aesthetically pleasing, they are available in alternate finishes to meet local building ordinances including stamped brick/CMU, stucco, vinyl and architectural siding. Designed to be maintenance-free and watertight, our step joint design and roof overhang divert water away from the vertical surface. All exterior fasteners and hardware are stainless steel.

ENVOLOCK BUILDING SYSTEMS

Envolock buildings are the pre-eminent alternative to conventional wood or steel stud framing. They provide a sturdy and flexible system that can be built in-house or delivered in kit form ready to assemble on-site. Envolock building systems utilize interlocking panels manufactured from material as heavy as 11 gauge steel, along with integral structural studs varying in depth up to 9 inches. All standard panels are straight, true 16" wide pieces that are lightweight and easy to handle. They are pre-punched for quick electrical and plumbing installation. Once a system is assembled, the exterior skin is complete and ready for the exterior finish. Highly regarded by green-conscious builders and consumers, all waste from the entire framing process should be able to fit in a five gallon bucket.

Envolock Building Systems are ideal for a variety of uses. They work well for control and instrumentation houses, telecommunication shelters, and disaster relief and reconstruction. The systems are also excellent for energy conservation, blast resistance and extreme loading conditions.

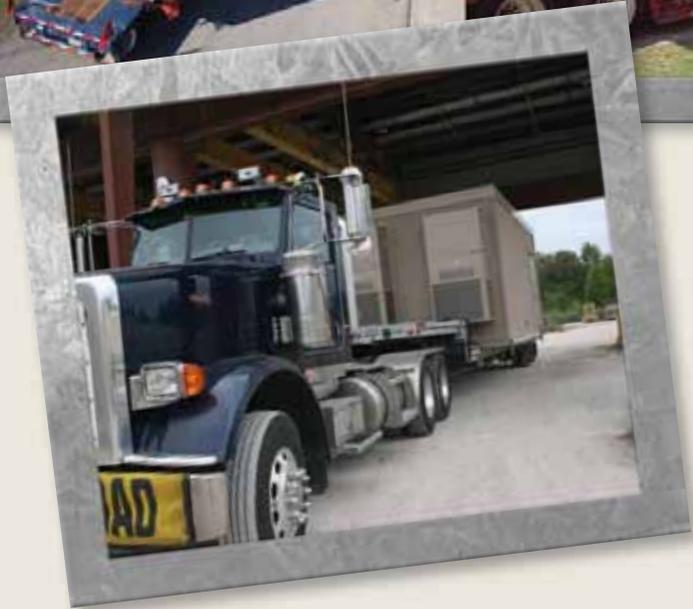

STRUCTURAL STEEL AND ULTRA-LIGHT ALUMINUM SHELTERS

Sabre Building Systems by CellXion offers structural steel and ultra-light aluminum shelters that provide secure, durable options when site accessibility is the governing factor. Our lightweight steel shelters with noncombustible construction are ideal for rooftop applications. Manufactured to specific fire resistance in accordance with Underwriter's Laboratory standards, we offer 1 hour and 2 hour fire-rated steel shelters. Bullet resistance can be achieved with ballistic-rated interior materials. Offering shelters that meet strict zoning requirements, Sabre provides a wide variety of finishes from high gloss to composite cedar shingles and brick. Our exterior finishes can also be matched to existing construction.

MOBILE/DISASTER RECOVERY PRODUCTS

In addition to providing shelters and building systems, Sabre Building Systems by CellXion designs and manufactures a full line of mobile, panelized and field-erectable products. Our mobile products include cell-on-wheels (COW), cell-on-light-truck-chassis (COLT), mini-cows, tower trailers and ISO container shelter configurations. Our cell-on-wheels and mini-cows have a floor load of 150 psf, roof load of 50 psf and walls that withstand 80 mph. The seismic zone is 4. They feature an all steel welded trailer and steel frame aluminum shelter. Both commercial drivers' license and noncommercial drivers' license rated cell-on-chassis units are available. Our all steel welded, tower trailers feature a 107' guyed telescopic tower with a 3 arm antenna mount. The triangular section tower is integrated onto the trailer assembly. Providing portable solutions, Sabre Building Systems' mobile products are perfect for disaster recovery operations. All of our mobile products are available for both domestic and international applications.

INTEGRATION SERVICES

Providing you with integrated solutions, our system integration services offer factory installation and testing of power and radio cell-site equipment. We have on-staff technicians that perform installations within an 80,000 square foot, dedicated, climate-controlled facility. With internet-enabled inventory systems that provide accurate tracking and implementation of consigned radio equipment, many of our customers rely on us to administer their asset tracking initiatives. In addition to these services, we provide 24 hour on-site, manned security with state-of-the-art electronic surveillance equipment; and a dedicated quality control, inventory and warehousing staff trained to meet specific customer requirements.

THIRD PARTY LOGISTICS

Sabre Building Systems' Third Party Logistics (3PL) offers great flexibility, improved operational efficiency, enhanced customer service, and an overall reduction in your operating costs. Our logistics services include transportation services, warehouse solutions and inventory management services.

TRANSPORTATION SERVICES

Sabre Building Systems' Transportation Department offers world class delivery service. Fully managing every shipment, we are your only point of contact. Our managers have expertise and knowledge in consolidation and routing of shipments. Focused on creating quality service tailored to meet the unique delivery requirements of all customers, we provide quarterly performance reviews, monthly cost KPI's, monthly service KPI's, manufacturer/vendor shipments, site direct shipments, load consolidation, and white glove shipments.

We also offer a Cross Docking Program. This program allows our customers to bulk ship to a distribution center strategically located near the primary market. Once the shipment arrives, it is separated into multiple shipments and then each individual shipment is delivered to its final destination.

Well aware that not every shipment goes smoothly, our Transportation Department has experience working with high priority (HP) shipments. These are shipments moving via truck or rail that need special care on short notice. HP shipments are typically caused by such things as replacements due to weather, changes in demand, manufacturer loading errors, after-hours delivery and direct delivery or cross docking requirements. No matter what your transportation requirements might be, Sabre Building Systems by CellXion can provide you with the most cost-effective solution.

THIRD PARTY LOGISTICS (CONTINUED)

WAREHOUSE SOLUTIONS

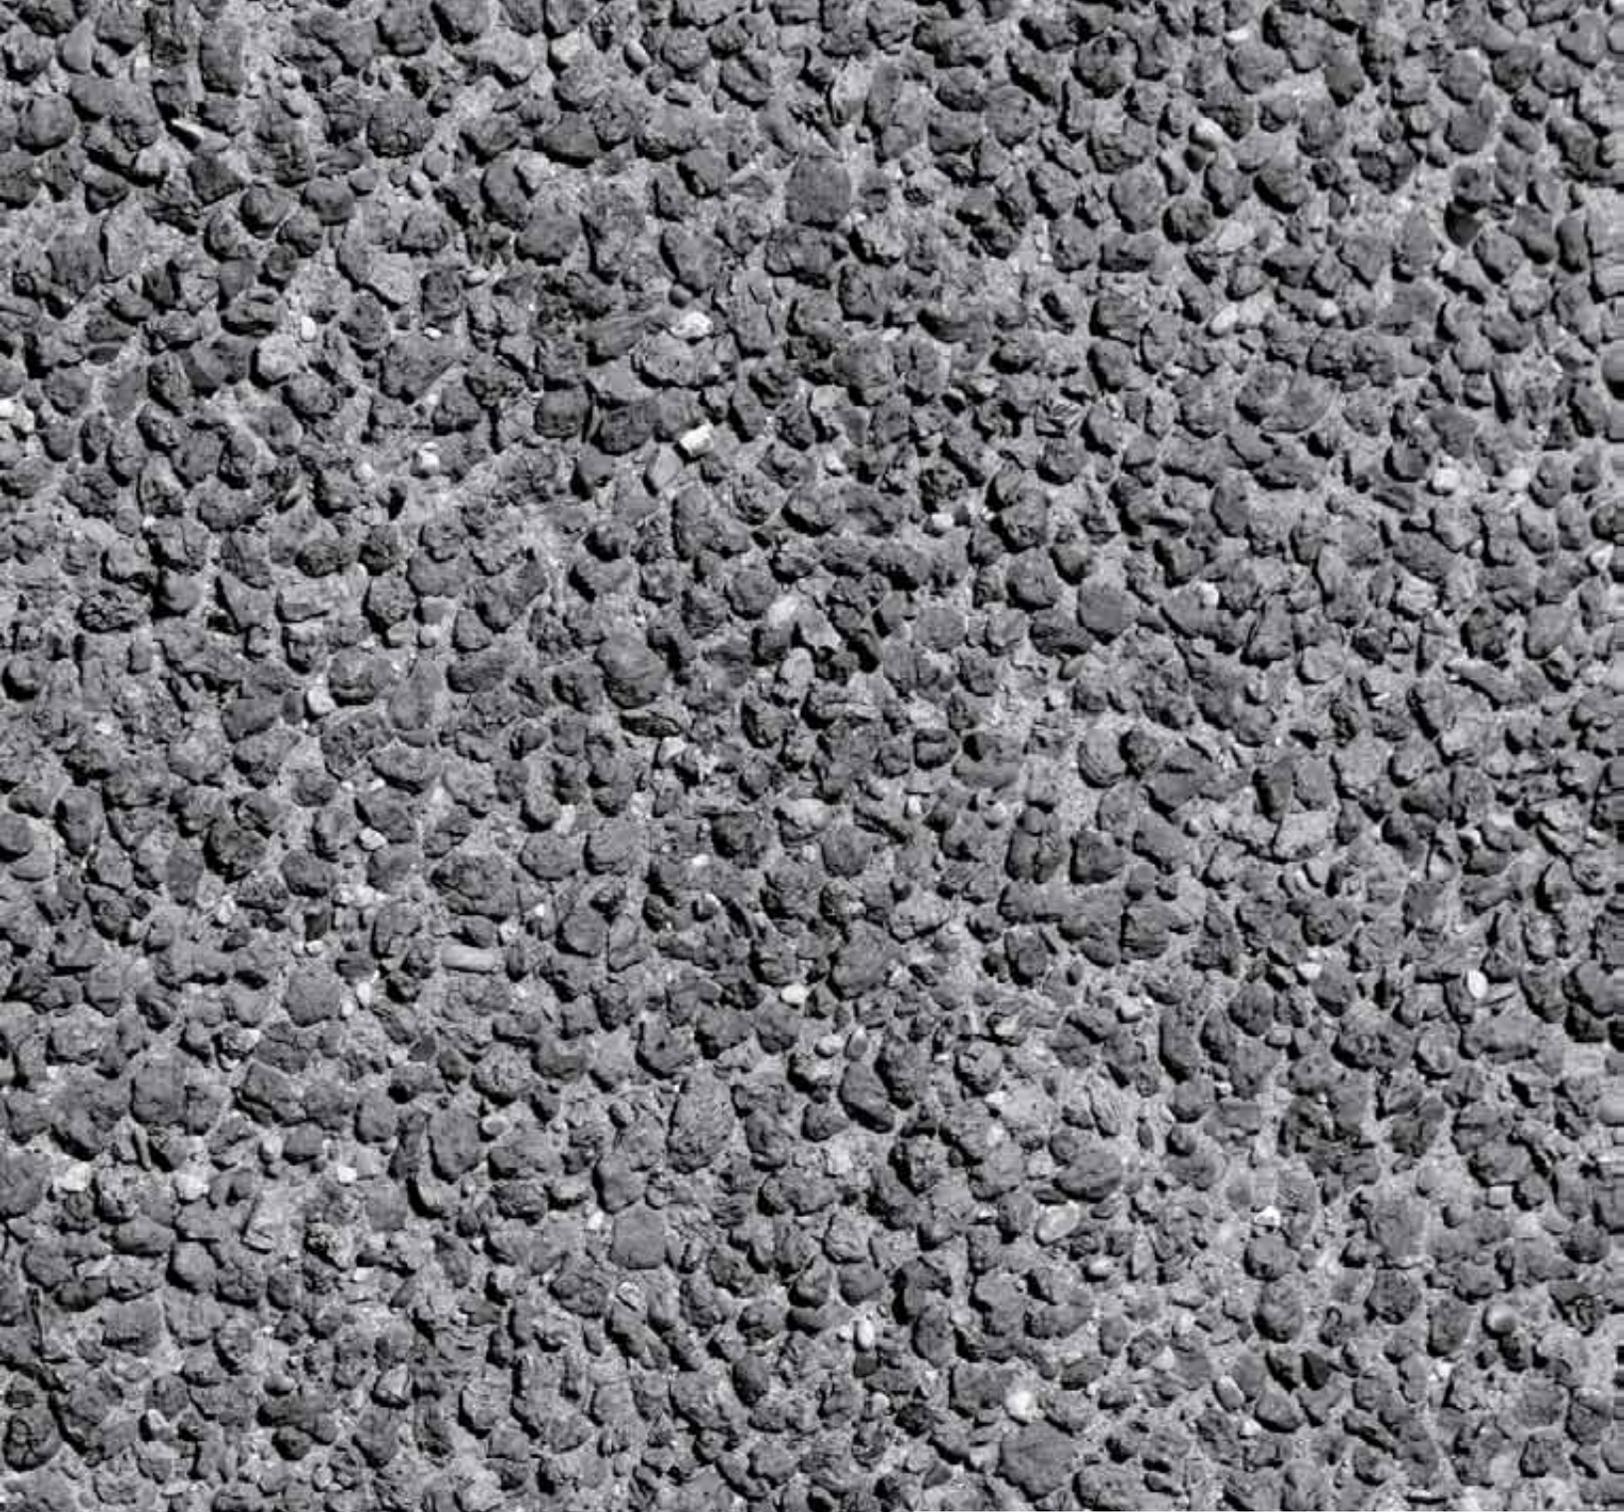

Included in our third party logistics is warehousing solutions. Sabre Building Systems' Warehouse Department has a reputation for providing outstanding customer service. With more than 2.5 million square feet of warehousing space available throughout the United States, we offer flexible solutions that are unmatched in the industry. Providing you with the ability to maximize profits, reduce costs and grow your business, we offer quarterly performance reviews, monthly cost KPI's, monthly service KPI's, on-demand locations, flexible space requirements, cross docking, and value added services. Our Warehouse Department is focused on creating quality service tailored to your unique warehousing requirements.

INVENTORY MANAGEMENT SERVICES

Sabre Building Systems by CellXion has a proven track record of providing the best in class in inventory accuracy. We practice only proven inventory control methods to ensure accuracy rates of 99% or higher. We accomplish this by partnering with our customers, benchmarking, and implementing only value added programs. We understand the importance of balancing inventory levels. Long supply can result in increased storage costs and lost sales due to obsolete (outdated) material. At the same time, short supply can result in increased transportation costs and lost sales. We are committed to providing you with world class service, and are confident that our detailed analysis and inventory tracking programs will help reduce your costs and increase sales.

DECOMMISSIONING/EQUIPMENT HARVESTING

When you need to consolidate overlapping networks, Sabre Building Systems' professional team can help by providing decommissioning and/or equipment harvesting solutions. Our services include any or all of the following: coordinating shelter offload and setup, harvesting radio equipment, warehousing of radio equipment, maintenance and refurbishment of shelters for redeployment, and demolition of older outdated shelters. In addition, we can provide tower and/or monopole quote requests for customers that are looking for a complete wireless turnkey solution.
